## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed on August 9, 2002 have been fully considered but they are not persuasive. Referring to claims 8, 9, 10, 12, 14, 15, 17, and 18, the applicant states that the element 82 does not have any annular cavity structure required by the claimed invention. The applicant also states that the element 85 is formed in a cavity. Referring to figures 8 and 9, Miyahara does provide any annular cavity (84 and 85).

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Miyahara et al. U.S. Patent No. 5,940,268. Referring to claim 8, Miyahara discloses a heat sink and electronic device employing the same that does comprise a heat sink 82 (figures 8 and 9) that includes a plurality of cooling fins 83 (figures 8 and 9) the cooling fins 83 defining an annular cavity (figures 8 and 9); and a centrifugal fan 84 and 85 (figures 8 and 9), formed in the annular cavity so as to be embedded into the heat sink 82 (figures 8 and 9).

Referring to claim 11, Miyahara shows that the annular cavity matches the centrifugal fan 84 and 85 (figures 8 and 9).

Art Unit: 3743

*Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Miyahara et al. U.S. Patent No. 5,940,268 in view of Liang et al. U.S. Patent No. 2002/0018336.

Miyahara discloses the applicant's invention as claimed with the exception of providing cooling fins that are distributed under and around a region extending from a central region of the centrifugal fan to a periphery of the centrifugal fan.

Liang discloses a heat sink apparatus that does provide cooling fins that are distributed under and around a region extending from a central portion of the centrifugal fan to a periphery of the centrifugal fan. Therefore it would have been obvious to modify Miyahara's invention by providing cooling fins that extend from a central portion of the centrifugal fan to a periphery of the centrifugal fan in order to speed up the cooling process.

***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
